Education

FAST-NUCES

Bachelor of Science in Computer Science

Lahore, Pakistan

Aug. 2025 – May 2029

Relevant Coursework

- Data Structures
- Object-Oriented Programming
- Algorithms Analysis

Projects

Zeno | *React Native, Expo, TypeScript, Supabase, NVIDIA NIM* | [GitHub Repo](#)

- **Core App:** Full-stack AI mobile app with authentication, chat persistence, model selection, and history: secured via Supabase Edge Functions and row-level security.
- **Quran GPT:** Source-grounded Q&A pipeline using UmmahAPI, pgvector embeddings, and NVIDIA NIM. Includes Hadith and Tafsir search, word-by-word study, Hifz tracking, quizzes, and daily verse notifications.
- **Web Search:** Tavily integration with inline source citations for real-time, verifiable responses.
- **Voice Interaction:** Deepgram-powered real-time speech-to-text, live captions, text-to-speech, and voice-to-voice conversation mode.
- **Daily Reminders:** Expo push notifications with Supabase-backed preference management for verse and dua delivery.

Education Q/A - RAG APP | *FastAPI, ChromaDB, Sentence-Transformers, Groq Llama* | [GitHub Repo](#)

- **Chapter-Scoped Search:** Limited retrieval to the specific book and chapter selected, so answers stay relevant and don't mix content from other chapters
- **Local Embeddings:** Used Sentence-Transformers to generate embeddings locally with no API cost, then passed relevant chunks to Groq's Llama 3.3-70B for fast answers
- **Grounded Answers:** Made the model answer only from retrieved content, with a fallback message when the chapter doesn't contain the answer

Ecommerce App | *Next.js, FastAPI* | [GitHub Repo](#)

- Built a full-stack ecommerce platform with a Next.js frontend and FastAPI backend, covering product catalog, cart, and checkout flow
- Deployed and iterated across two separate implementations to compare monolithic vs. API-driven architecture trade-offs

Expense Tracker | *React Native, Expo SDK 57, Supabase* | [GitHub Repo](#)

- Built a cross-platform expense tracker with real-time Supabase sync across devices
- Diagnosed and fixed a peer-dependency crash loop blocking builds, restoring a stable dev environment for continued feature work

DSA Visualizer | *C++, SFML* | [GitHub Repo](#)

- Built a real-time animated visualizer for five sorting algorithms to aid algorithm comprehension

Technical Skills

Languages: C++, Python, JavaScript, TypeScript

Frameworks/Libraries: React.js, React Native, Node.js, Next.js, FastAPI, LangChain

Platforms/Tools: Supabase, Groq, n8n, Git, ChromaDB, Expo

Leadership / Extracurricular

Character Building Society | *FAST-NUCES*

- Managed planning and execution of society events, coordinating logistics and team members to ensure smooth delivery
- Contributed to peer-led personal development and character-building initiatives on campus

Build-in-Public Series | *LinkedIn Content*

- Publish a recurring series documenting the technical development of Zeno, covering architecture decisions and engineering trade-offs
